

Figure 5E — Partial Spearman: CLR vs Dysbiosis Score | group_id
CLR=taxon and dysbiosis=score residuals after regressing out group_id (partial Spearman). y = $-\log_{10}(\text{BH-adj. } p)$; labels = guild members + discriminatory taxa + top 5 promoting/protecting (visual threshold padj < 0.05; CSV `sig` column uses padj < 0.2). n = 18 samples.
